

Territory #7  
Joyce & Wolfgang Pelz  
12/31/2021

This territory has seen considerable construction in the northern part of the territory over the last few years in residential, commercial, and health-care related buildings. There has been a significant reduction in habitat for birding.

#### Gorge Metro Park

- Restrooms in the parking area
- Gorge Trail is essentially an out-and-back hike
- Glens Trail generally has some mixed flocks
- A good loop is Glens Trail to turn-around point, then Front Street back to parking lot. Lots of feeders along Front Street that also attract Cooper's Hawks

#### Oakwood Cemetery

- Variety of birds including juncos, red-tailed hawk, mixed flocks

#### Wyoga Lake

- Some waterfowl
- Apartment complexes can sometimes be productive
- Wetlands area along the southwest shore has been productive in the past

#### Wyoga Lake Road

- North of the driving range and opposite the ball fields, there is a small pond that has had teals in the past. Visibility is questionable depending on trimming of surrounding vegetation (especially Phragmites)
- Walsh Jesuit fields
- The woods behind Cuyahoga Valley Christian Academy have been productive at times (area behind CVCA can be wet). There is a trail in the woods that has yielded woodpeckers including flickers

#### Old Mill Pond

- Accessible from Emidio & Sons Banquet Center (if gates are unlocked), State Road (careful of traffic) and the end of People Care Park Drive

#### McCauley Road

- Northern harrier and other hawks have been seen along McCauley Rd

#### Residential Areas

- Many homes have feeders and shrubs that are productive for smaller birds as well as the occasional raptor, mostly in Cuyahoga Falls
- The numbered streets North of the Gorge surrounded by Front St., State Rd, Chestnut Blvd. are worth checking (this can be done as part of the Glens Trail loop in the Gorge Metro Park, see above)
