Gardening for Pollinators

From bees to butterflies, pollinators are vital for the production of the food and flowers in our landscape. Discover how to increase your pollinator-friendliness by incorporating native plants into your garden. We'll take a photographic journey through your garden and uncover the many faces that dwell in your landscape.

Danae Wolfe works for OSU Extension as Summit County's Agriculture and Natural Resources Extension Educator. She teaches the public about a variety of horticultural topics including sustainable gardening practices and macro photography. Before coming to Extension, Danae worked for the National Park Service as a interpretive park ranger where she taught the public about the threat of invasive plants.
